

AFORE Solutions wins a wireless backhaul gateway consulting project

Ottawa, Ontario, Canada January 9 2007 - AFORE Solutions Inc. enters the new year with its continuing business success by winning a wireless backhaul system design consulting project. New multimedia mobile services such as HSDPA and EVDO demand more bandwidth and require new packet based access in radio access network. This results in the development of new packet based multi-service convergence gateway products located at cell sites and mobile switching central offices. With this project win, AFORE will deliver a system architecture for a new wireless backhaul gateway to an industry leading wireless backhaul solution provider.

"Wireless backhaul is one of the key market segments that AFORE is focusing on." said John Osanitsch, VP of Sales and Marketing, AFORE Solutions, "AFORE is well positioned to provide solutions to wireless backhaul equipment vendors with its engineering capacity in 2G/3G wireless, IP/MPLS, PWE3, Carrier Ethernet, Circuit Emulation, ATM/IMA, Network Processors, and transport networks. We will continue providing value added engineering solutions including consulting, design services, and software components to wireless backhaul equipment vendors."

About AFORE Solutions

AFORE Solutions Inc. is an embedded SW and HW solutions provider specializing in design services for networking companies. AFORE provides R&D solutions that accelerate our clients' time-to-market while reducing development costs and are based on proven reference designs, robust software components, engineering services and professional engineering processes.
